

Twisted SuperSenses

Passthrough VR Sensor Mesh — See the Invisible World

Overview

Twisted SuperSenses turns Meta Quest 3 passthrough VR into a 'super-sense' system. ESP32 sensor nodes detect RF, WiFi, thermal, EMF, AC fields, and human presence — rendered as real-time 3D overlays on passthrough video. Includes iOS AR companion app with LiDAR.

Current Status

- iOS AR app: Live in TestFlight (v0.3).
- ESP32 firmware: 7 of 11 sensor types coded.
- Python WebSocket hub: Live bridging sensors to Unity / iOS.
- Unity 6 scene: Partial RF, WiFi, thermal, EMF visualizers.
- Brand system: Established under Twisted Stacks visual identity.

Budget

Hardware (ESP32, sensors, Quest 3)	\$8,000
Firmware development (PlatformIO)	\$15,000
Unity 6 development	\$12,000
iOS AR polish and App Store	\$8,000
Backend / hub development	\$5,000
Testing and certification	\$7,000
Contingency (15%)	\$8,500
Total	\$63,500

Timeline

Month 1-2: Hardware and Firmware	Complete all 11 sensor firmwares	Week 8
Month 3-4: Unity	Full scene with all visualizers	Week 16
Month 5-6: Launch	iOS + Unity ship, Quest Store	Week 24
