

ANSLAG

AI-Powered Grant Discovery and Application Platform

Overview

ANSLAG (Swedish for "grant") discovers grant opportunities — Almi, Vinnova, EU, ERUF, private foundations — and drafts complete applications. Combines Exa API web search with OpenRouter LLM drafting in one workflow. Already live at anslag.twistedstacks.com. 27+ funding opportunities mapped, 7 product-fit matrices, 5 completed application packages.

International Expansion

Currently Swedish-first, but the architecture is region-agnostic. Adding EU (Horizon Europe, EIC), UK (Innovate UK), or US (SBIR, NSF) grant sources is a translation and data-source task — not a rebuild. Estimated effort: 2-3 weeks per region for indexing + translation layer.

Current Status

- Live in production at anslag.twistedstacks.com.
- 25+ grant sources indexed.
- 5 complete application packages drafted.
- Ready to ship: polish, landing page, marketing.

Budget

UI polish and bug fixes	\$5,000
Landing page and marketing	\$8,000
Hosting and API costs (12 months)	\$2,000
Grant database expansion	\$4,000
User testing and launch prep	\$3,000
Contingency (15%)	\$3,000
Total	\$25,000

Timeline

Week 1-2: Polish	UI fixes, landing page, hardening	Day 14
Week 3-4: Launch	Public launch and marketing	Day 30
